

E-blocks™ Patch board

Facilitates development of new circuits for the E-blocks system
EB017

- 40 * 18 hole patch area
- Separate holes for power rails

This E-block contains a small patch board for developing circuits and projects. Connectors for two E-block ports allow prototype wires and leads to be connected to the rows and columns on the prototype board.

This E-block is used where there is a requirement to set up semi-permanent dedicated E-blocks. This E-block is supplied in kit form – the D-type connectors need to be soldered into place.

This board is part of the E-blocks™ family of products:
